

T-Plotter: tool for plotting celestial lines of position

<http://www.t-plotter.com>

T-Plotter™ is a device consisting of two mutually perpendicular arms designed to simplify the plotting of celestial lines of position by eliminating the need to also plot their azimuth lines.

T-Plotter Basic works with the scale characteristic of the Universal Plotting Sheet (VP-OS), where 1 inch on the plotting sheet represents 20 nautical miles on the surface of the Earth.

Acrylic. Height: 6 1/4" - Width: 11" - Thickness 1/8".

Made in USA

We also offer three other versions of the T-Plotter: **Blank**, **Compact**, and **Compact Blank**.
